

The Role of COVID Vaccines in the New World Order System

A Special Interview With Dr. Vladimir Zelenko

By Dr. Joseph Mercola

Dr. Joseph Mercola:

Welcome everyone. Dr. Mercola helping you take control of your health. And today, we are joined by a repeat guest, who's been with us twice previously, Dr. Zeb Zelenko, who is best known for his popularization of the hydroxychloroquine protocol early in the pandemic, where he was treating hundreds of patients a day at sometimes, and had unbelievable success with this such that he was able to communicate directly with President Trump, and he subsequently championed it. But things have changed a bit since then, and we're going to get an update from him now. So welcome and thank you for joining us today.

Dr. Vladimir Zelenko:

Thanks so much for having me.

Dr. Joseph Mercola:

So your practice was in New York, and you migrated to the much nicer state of Florida, both from a political perspective and from an environmental perspective. So maybe you can tell us how that transition is going.

Dr. Vladimir Zelenko:

Well, Florida is a completely different vibe. It's much more relaxed just because of the sun and the weather, but also the policies are turning. I feel I'm not attacked by mask Nazis like I was in New York, and I wasn't threatened by, not yet at least, by the governor and the attorney general. So I like Florida more.

Dr. Joseph Mercola:

Well, great. So what have you been doing in the recent months? Maybe you can get us up-to-date, and then we're going to go into some of your personal stories, too.

Dr. Vladimir Zelenko:

Teaching to whoever wants to listen, giving interviews four or five hours a day sometimes, spreading awareness of general principles of early treatment, especially in high-risk patients, prophylaxis, both prescription and over-the-counter options, and trying to educate the public that no one really needs to die from COVID. It's a very treatable infection, or should I say bioweapon, if done within the first few days because COVID is two diseases. It's the infectious stage of the virus, and then a week later, you have the pathogenic inflammatory reaction that does all the damage to the lungs and causes blood clots. So it's all about timing. And the data is very clear. There's dozens of peer-reviewed studies that prove that if you treat COVID within the first few days, you have a 85% reduction in hospitalization and death. It's a no-brainer. You could have saved 700,000 people from going to the hospital out of 800,000.

Dr. Joseph Mercola:

Yeah. You were one of the first people warning about the early treatment component. So I'm wondering, are you still actively treating patients now?

Dr. Vladimir Zelenko:

Remotely. My health issues are of ... And geographically, I've moved. So I am licensed in Florida, but my practices are still going. And I have multidisciplinary groups, other doctors working there, mid-level providers. I am available by telemedicine, but my passion now is really research coming up, coming up with — By the way, I want to thank you about something in a minute — but coming up with simple, natural approaches to complex problems. Like for example, there's a treatment for smallpox called *Sarracenia purpurea*. I'm sure you know about it, and it was-

Dr. Joseph Mercola:

Only because I've heard you on different podcasts talk about it, yeah.

Dr. Vladimir Zelenko:

Yeah. Yeah. So I'm looking for natural, alternative approaches to solve some medical problems. And I've been really red pill'd out of necessity because having cancer and going through two open-heart surgeries and three years of chemo and radiation, and that not having worked, and running out of options, I reached out to you. And with your help and guidance and wisdom, you really pushed me in a different direction. And it seems to be really improved, my condition. So thank you.

Dr. Joseph Mercola:

Well, you're most welcome. I was delighted to be able to help you with that. Maybe we should just review some of the details because I think you were suffering with a very rare type of cancer, pulmonary sarcoma, I believe, which is universally fatal. There's not that many of them, but they gave you — I forget what they told you, but you only had a few months to live or so. So why don't you take it from there and give us the specifics.

Dr. Vladimir Zelenko:

Yeah. I think it was three and a half or four years ago, my daughter was 10 days old, I remember, almost four years ago, I was diagnosed with pulmonary artery sarcoma. And there's only 10 cases on average per year. And they're all found autopsy. In my case, they thought it was a blood clot that didn't respond to blood-thinning medication. So the decision was made to do an embolectomy or open my chest, go into the pulmonary artery, and take out a blood clot. But when they did that, they saw it was a tumor, and it had completely destroyed my right lung. So I lost my right lung. And they resected a large part of the pulmonary artery and had to reconstruct it because you need that artery to live.

Dr. Vladimir Zelenko:

And then I was in chemo. And then I was on oral suppressive chemo. Excuse me. I've been doing so many interviews, I'm losing my voice. Anyway, so I was pretty good for two years, and then it came back and it had spread to my hip as well. And so I had another open-heart surgery. They had to replace one of my heart valves, pulmonic valve. Then I went for radiation to my hip. And then I went on really heavy chemo. And after two months on that, I went into congestive heart failure and developed cardiomyopathy. And my ejection fraction, or the way the heart pumps, which is normally around 65, fell to 35, which is analogous to someone who had a major heart attack. My lungs filled with fluid. It was really not so pleasant. And then I recovered from that, and I was put on heart failure medication, and obviously stopped that chemo. And after a month or two, I was put on something oral.

Dr. Vladimir Zelenko:

And then a month after that, I wasn't feeling too well. Went to the doctor, did a blood test. My white blood cell count was very low because the oral chemo had suppressed my bone marrow and I then

developed COVID pneumonia, believe it or not, in my one remaining lung on both lobes, in the left lung in the upper and lower lobes. I was pretty sure I was going to leave in a box, and yet I recovered.

Dr. Vladimir Zelenko:

And then a few months later, I went for a surveillance, another CT scan, and they found, again, the tumor was back in the pulmonary artery. But this time, no doctor wanted to operate on me. A third open-heart procedure is very dangerous. They estimated more than 50% likelihood I would die on the table, which I didn't like. So I ended up having pretty intense radiation to my mediastinum, where the tumor was.

Dr. Vladimir Zelenko:

And that's when you came into the picture in terms of advising me with treatment. And I ended up having immunotherapy in Europe for two months with checkpoint inhibitors, but also hyperthermia and mistletoe injections, and alpha lipoic acid, and vitamin C, really high dose, and different other modalities. And I feel better than ever. I had a CT scan last week, and it showed the tumor shrank by third. And I spoke to the radiation oncologist and told me that a good result would've been the same size or smaller. It takes years to resolve. It's not 100% that it's actually live tumor. So time will tell, but it's easier for me to walk, and hemodynamically I'm more stable, and I feel good. Amen.

Dr. Joseph Mercola:

You told me also that you lost 50 pounds in the process because you shifted your diet.

Dr. Vladimir Zelenko:

Yeah. I need new clothes. Nothing fits. Yeah, I weight 172. I have not weighed this weight since I've been 18.

Dr. Joseph Mercola:

It's a good process. And it's remarkable to see how much you've improved with such a bad prognosis, and more importantly, having accepted the conventional model, which typically most people with cancer nowadays die from the treatments, not from the cancer. And they blasted you up and down, left and right, and sideways. So I'm really delighted that the intervention seems to make a difference at this point. So it seems to be going in the right direction. But it really is remarkable how we're pushed to the limits sometimes with our circumstances that are given to us. And out of last resort, we come to wake up and realize that there's other better strategies to address this. So maybe you can comment on that perspective.

Dr. Vladimir Zelenko:

Well, this whole COVID story completely changed the way I look at life. I mean, when I saw natural, effective, over-the-counter solutions being marginalized and suppressed, and then the vaccines being pushed, I realized that there's a lot of evil going on. I'll give you an example.

Dr. Vladimir Zelenko:

In New South Wales, in Australia, any doctor that prescribes hydroxychloroquine or ivermectin goes to jail for six months. I mean for COVID, goes to jail. And what's the reason? They tell you because it encourages vaccine hesitancy. In other words, they're not denying it works. On the contrary, it works. And because of that, people are choosing to not take the vaccines, but rather take the over-the-counter or prescription approaches, but in the early phases of the illness. And that's contrary to the narrative and the agenda of whoever's running the show here.

Dr. Vladimir Zelenko:

So that understanding and that realization has opened me up to understand that probably — Well, not probably, definitely, same thing happened with cancer where probably effective approaches were marginalized in lieu of the more expensive and let's call it pharmaceutical approaches. I'll give you one example. It was a Dr. Cooley. I'm sure you heard of him, Cooley. He was an oncological surgeon, lived around 100 years ago, maybe 120 years ago. And he noticed that his patients, he would operate on them, and the tumor would come back and they would die. And then he observed something very interesting. He had a patient with pancreatic cancer, stage four, inoperable. And that patient got very sick with an infection, became septic. He almost died, but he didn't die. And he recovered from the infection and his tumor went away.

Dr. Vladimir Zelenko:

And then he noticed that type of phenomenon a few more times, and he realized that there must be some immune reaction, immune response to the infection that wakes up the immune system to also attack the tumor. So basically, in my opinion, that was the birth of immunotherapy. And so fever seems to play a role. It seems to have anti-tumor properties, as well as activating certain parts of your immune system. So, it's fascinating. And that information was buried for a good long time, 50, 60 years, until some doctors rediscovered it and started doing research. And I benefited from that in Europe.

Dr. Joseph Mercola:

Yeah, because we do it a little bit differently now than when Cooley was doing it with the toxins, because it wasn't as precise, and many people died from the treatment. But in most cases, they didn't really have an alternative, an effective alternative. But now, they actually do it just by raising your body temperature. So maybe you can describe your experience, what the hyperthermia was like.

Dr. Vladimir Zelenko:

That was quite an experience. Having a temperature be around, was it around 40 Celsius? Let's say 104 [Fahrenheit], for like five hours, you become a little loopy and a little anxious, but otherwise I drank a lot of fluids and I had a nurse with me all the time. It was a pretty interesting experience. And then there were whole-body hyperthermia machines and localized hyperthermia. Basically a fancy sauna. And it was like a spa actually. I did enjoy the treatment in most cases.

Dr. Joseph Mercola:

Yeah. I think a sauna is one of the most powerful bio hacks or interventions that I personally do. And I do it several times a week. And I get my temperature up to not 104, but about 102 or so, for 15 minutes, not four or five hours. But done slightly, I think it's a really profoundly effective health habit to nip infections in the bud, but also any potential malignancies that might be coming around to try to get a hold on you. So it's a powerful strategy, but I'm glad you were able to get that. So, all right, well let's pivot back to the infection, COVID pandemic. So it appears that the course of the infection has changed somewhat with this new variant, Omicron, and that it's far more contagious. But the counter is that it clearly has less severe symptoms. So I'm wondering if you've noticed that in your patients that you're treating through your staff.

Dr. Vladimir Zelenko:

Yeah. So is Omicron unstoppable. It's more infectious than measles. Everyone's going to get it. Sorry, but that's the case. However, it seems to attack only the upper airway in most cases. And there are very few deaths. And it's very responsive to treatment as well. So there's no reason to be afraid of it.

Dr. Joseph Mercola:

Yeah. So it almost seems like it's a Christmas present for the population in that this is really the authentic vaccine, the way that nature was designed to provide immunity through natural route of being exposed to the infectious agent. And so ideally, it spreads around to everyone, which is going to increase its prevalence in the population and truly produce herd immunity.

Dr. Vladimir Zelenko:

It's like the old time chickenpox parties, if you remember.

Dr. Joseph Mercola:

Oh yeah.

Dr. Vladimir Zelenko:

Where basically, you get through it, and you develop immunity to it. When two-thirds of population gets through it, it essentially shuts down the pandemic. However, we have to be realistic. I want to talk about variants in concept and explain to people the different possibilities. Variants, there's a mutation rate in viruses that is set by God. Essentially, it just happens and whole viruses mutate. It gives them survivability benefit.

Dr. Vladimir Zelenko:

However, in this particular — And that's happening in this case as well. However, there's other factors here. There are three doctors I want to mention, probably the world-leading immunologists. I'm sure you heard of them. Dr. Luc Montagnier, won the Nobel Prize in 2008 for finding HIV. Dr. Sucharit Bhakdi, the most published immunologist in history, and Dr. Geert Vanden Bossche, one of the top immunologists in the Netherlands.

Dr. Vladimir Zelenko:

They all said the same thing, which is if you vaccinate people during an active pandemic, you cause variants to happen. You exert evolutionary pressure and you kind of breed more varying viruses. Now, even in that category, there are two possibilities. One could be that it was unintentional. Good, well-meaning people developed what they thought would help, a vaccine. However, giving it to people during a pandemic has been an absolute failure. Oops, we're sorry. That's one possibility.

Dr. Vladimir Zelenko:

The other possibility is whoever has orchestrated this knows exactly what they're doing, and they are doing it on purpose to maintain the new variants and the consequences of that, which is essentially a psy-op, a global psychosis due to fear and lockdown and wearing a face diaper. And there's one more possibility. There's no dispute. Everyone who knows the facts and has studied the issue knows that COVID-19 is a weapon made in a laboratory. And what's called gain of function research is nothing more than making a weapon of mass destruction and genocide. And there's a patent trail 20 years long that actually documents the different stages of development of this weapon.

Dr. Vladimir Zelenko:

And here's my supposition. I have no evidence of this, but I could say the following. If I could make the original virus, I could make variants. It's very easy. You just change a few sequences of the code that goes with the spike protein. You change its three-dimensional shape, and if you do it enough, eliminate existing antibodies. So again, I don't have evidence for that, but I do have evidence that this is an artificially made bioweapon, COVID-19. So why wouldn't it be possible to make variants the same way? So I think it's kind of a combination, multifactorial cause of variants, the natural God factor, the

evolutionary pressure exerted by vaccinating people during an active pandemic, and then just outright making them.

Dr. Joseph Mercola:

Do you speculate there's some white hats that actually engineered a beneficial infection that was essentially non-lethal, but highly contagious?

Dr. Vladimir Zelenko:

Well, I haven't thought of that actually. That's a nice possibility. I have no ... I could speculate it's a possibility. That's all I can tell you.

Dr. Joseph Mercola:

Well, could just-

Dr. Vladimir Zelenko:

I want to tell you something very new that I learned that has some profound implications. In March of 2020, I saw a video, MedCram episode 34, Dr. Schultz. And he explained the principles that I then used to build my protocol. And he quoted a paper that explained the functioning of zinc ionophores with zinc. And that was very exciting for me. And I built my protocol on it. What I didn't realize until a month ago was the author of that paper was Dr. Ralph Baric.

Dr. Vladimir Zelenko:

And you got it right away. But to the listeners who may not have all the puzzle pieces, I'd like to explain. In 1999, Ralph Baric, funded by the government, at the University of North Carolina at Chapel Hill, figured out how to take an animal virus and have it be able to infect other species, different animals. In other words, cross-species infection. And in 2015, the same Dr. Ralph Baric, and Dr. [Shi] Zhengli of Wuhan, funded by the NIH, figured out how to make a Corona bat virus infect human beings, and augmented its lethality to human lives. And that was in 2015. But in 2010 was when Baric published a paper that I'm referring to.

Dr. Vladimir Zelenko:

So the development of the weapon happened in stages, but before it was unleashed onto the human population, or the development of it being able to infect human beings, an antidote was made, research paid for by the government published. And so the same people that made the bomb, let's say, also created the antidote to diffuse the bomb. And then, when the pandemic arrived, doctors like myself, out of necessity, came up with creative solutions, based, in my case, unknowingly, on this work. And immediately, that information was marginalized, suppressed, and doctors were de-platformed who were advocating for it.

Dr. Vladimir Zelenko:

So the government who made the bomb also knew about the solution. And the reason why is they didn't want to die. The stakeholders here don't want their families to die. But for you and for me, they have a different agenda. So they had that information. I have knowledge that the Google executives are all taking hydroxychloroquine and ivermectin for prophylaxis, as is half of Congress. And so the people that have orchestrated this knew the answer and use it for themselves. And even doctors to this day, they know the answer for themselves. They prescribe them for themselves, or they call me. But when patients come, they say, there's no treatment, go home, take Tylenol. So this is mass murder.

Dr. Joseph Mercola:

Indeed. It's a genocidal intervention that's been at least somewhat successful until this point. So one of the big questions on the table is what is the likely outcome of giving the COVID jab to hundreds of millions of people? I mean, no one knows for sure because the data's been so seriously manipulated, but there's a high likelihood that the number of people who've been killed by the jab exceeds the number who have died from the infection.

Dr. Vladimir Zelenko:

Yeah. We're somewhere between 500,000 to a million. That's my guesstimate. In October, 2020, two months before the vaccine roll out, I'm sure you know there was an internal presentation in the FDA to its scientists. And on slide 16 of that presentation, there was a list of side effects, death, heart attack, stroke, blood clots, horrific neurological diseases, myocarditis and many, many more.

Dr. Vladimir Zelenko:

Now keep in mind, this is two months prior to the roll out. After the vaccines were rolled out, and a few months into it, when the VAERS database started showing the side effects that people were experiencing, there's a 100% correlation with what that slide said would happen to what actually happened to human beings. That is premeditated mass murder. FDA knew exactly what it was doing. They knew exactly the side effects, and they released it anyway because their agenda, which we can discuss, is pretty clear by now.

Dr. Joseph Mercola:

Is that slide still available? Or did they take it off the site?

Dr. Vladimir Zelenko:

Yes, of course. No, no, I have it. We downloaded it. I have the whole presentation. I'll send to you.

Dr. Joseph Mercola:

So what do you think their agenda is?

Dr. Vladimir Zelenko:

Let's take a step back. In the mid '90s, it became obvious that the American economy was doomed. The Medicare and Social Security systems would become insolvent, and that would cause a tsunami-like effect nationally and internationally. And it's unstoppable. It was past the threshold.

Dr. Joseph Mercola:

Mathematically inevitable.

Dr. Vladimir Zelenko:

Yes. As of today, Medicare, according to Congressional Budget Office, 2027 will begin the process towards bankruptcy. So security as of today is 2034. Now, the major stakeholders in the world economies saw an existential threat. They understood that their power and wealth was in real jeopardy.

Dr. Vladimir Zelenko:

And so a plan was developed, which was beyond the technology at that time, but the technology was being developed. So for example, the Human Genome Project was mapped and completed. Then CRISPR technology was developed, which is gene editing or gene splicing in very precise ways. And that was sold

as a way to cure genetic diseases. There's a defective gene. You can just cut it out and splice in, cut and paste basically a healthy gene.

Dr. Vladimir Zelenko:

And that could be done, however. And that's the upside. The downside is that it creates possibilities to do gene editing in other genes for nefarious reasons. We'll talk about that. And so in 2015, Bill Gates, as you know, said that the world population needs to be reduced by 15% through the use of vaccines because of global warming. The same Bill Gates in 2020 said 7 billion people must be vaccinated. So obvious question is, it's a rhetorical question. Why would I take a vaccine for my health from someone who's advocating the use of vaccines to reduce the world population? That's a side question.

Dr. Vladimir Zelenko:

In 2016, Klaus Schwab, in an interview, it's recorded, we have it, said something very strange, that within 10 years, by 2026, every single human being will be tagged with a digital identifier. And I didn't even ... Like, what does that mean and why? So let's go through the sequence of events. A bioweapon is made with an antidote, which is being suppressed and hidden. It's released. It's extremely easy to treat. However, that information is being suppressed, and access to those medications is being suppressed, and doctors who are advocating for it are being persecuted. And anything that seems to give people hope, lessen anxiety, encourage reintegration with your loved ones seems to be immediately vilified, even early intervention. If you look at the National Institutes of Health (NIH), they recommend, as of today, not to treat COVID unless they're in the hospital with lung damage. That's today's recommendation. Don't do that. That's recommendation of them.

Dr. Vladimir Zelenko:

And so I was wondering like, what is really going on? And why this incessant push to vaccinate everyone? And why jail doctors for using meds at work? Because it encourages the vaccine hesitancy. And then I realized something. There were two patents that I became aware of. They're separated by a year, but they're linked in the puzzle, in the concept. One was August 31st of this year, that describes — It's 50 pages, a very difficult patent to read, 50 pages of nanotechnology engineering.

Dr. Vladimir Zelenko:

But when you get through it, it basically describes the following. That there is the capability, the technology, already existing in these vaccines that allows for the measurement of biometric data, meaning your heart rate, your respiratory rate, temperature, and then the transmission of that data with your location to a third party. And that didn't even make sense to me. Like what? But then I realized there's another patent owned by Microsoft. And this one I remember by heart. It's an international patent, WO2020060606. You can't make this stuff up.

Dr. Vladimir Zelenko:

And that patent describes linkage of biometric data transmission to cryptocurrency. Then I got it. And by the way, 2026, when everyone's supposed to be tagged with a digital — let's call it an internal Auschwitz tattoo — is a year before the beginning of the insolvency of Medicare and the beginning of economic collapse. And so here it became obvious to me, the real agenda.

Dr. Vladimir Zelenko:

It's never been about health. COVID-19 is easy to treat. It was always about using fear and mass psychosis to get 7 billion people to willfully get injected with the technology that would permit them to participate in the new cryptocurrency-based system, which will be the system that the world will use for

finance. Fiat currency and all the traditional ways of transactions will be gone. And the only way that you actually participate in transactions, of buying bread, let's say, is having literally a sensor, a transmitting sensor of information with your location. And with that, it's the mark of the beast, if you really want to know. But with that, you can then buy bread for your family. Now I have a few questions.

Dr. Joseph Mercola:

Well, let me ask a question first, because that's quite remarkable comments that you made on the patent that you read. And I've been an advocate of technology for many, many decades now. So I tend to follow the literature. And I know that we have devices about the size of a grain of rice that you can embed in the body that will absolutely do what you're saying. But it's really hard to imagine that the technology has improved so much that it can be miniaturized to the point where it can be injected through a 23 gauge syringe into a person's body. So one is that you have the ability to collect the biometric data. And then two is, which is even more mind boggling, is to transmit it because that involves some fairly significant technology to do that. I mean, it just doesn't ... And it usually is a lot bigger than you're going to squeeze through this size of a 23 gauge needle. So what is your take on that?

Dr. Vladimir Zelenko:

My take on that is that I'm going to give you the patent number to go through it, and then maybe my interpretation is wrong. But I don't think so. And then we can discuss it because basically, just because it's hard to believe doesn't mean it doesn't exist.

Dr. Joseph Mercola:

No, I get that and I'm absolutely certain that the technology will exist at some point. I just don't know that we're there yet, especially in light of the fact that almost everyone on the planet has a cell phone, and that cell phone is right now almost the ultimate tracking device. It's embedded with ... It's pretty much a multi-sensor device to track you, locate you, and feedback information. And the technology is there to seamlessly do it, and the connection in the cellular networks. So I don't know why they-

Dr. Vladimir Zelenko:

The difference is that I could leave cell phone at home.

Dr. Joseph Mercola:

Yeah, it's not much of a big difference. I mean, you could pretty much configure society to demand that you had to interact with your cell phone. In many cases, that's the way it is now. That's what they're targeting these vaccine passports for. It's going to obviously be not a chip on your arm. It's going to be on your cell phone.

Dr. Vladimir Zelenko:

But it's much more let's call it efficient if it's in you. And there other reasons why it's being done. Heart attacks, strokes, myocarditis, miscarriage rates up from 10% to 82% in the first trimester, increases in cancer, increases in autoimmune diseases, increase in testicular and ovarian dysfunction, most likely infertility, and antibody-dependent enhancement, or I think you like to call it-

Dr. Joseph Mercola:

PI, paradoxical immunity, yes. That term never took off though. Almost everyone uses ADI.

Dr. Vladimir Zelenko:

But that's pretty bad enough as it is. But if you listen to the words of Bill Gates and Klaus Schwab in interviews, and I have this information. By the way, I'm asking anyone who's listening to me not to believe a word I'm saying. Listen, if you want, do your due diligence. Take the information I'm giving you, vet it, come to your own conclusions. Don't make the same mistake with me as you've done with the government with blind faith. Blind faith belongs to God, not to human beings.

Dr. Vladimir Zelenko:

And so Bill Gates and Schwab both talking talk about these vaccines change who you are. So what does that mean? And they explain it. That because of the gene editing technology, they are making the human better. That's where transhumanism, I'll call it Human 2.0. So Human 1.0 is the version that's made by God. And what really we are is imprinted in the genetic code. We're made in the image of God because we have his code in us. Now, would you give Bill Gates or Klaus Schwab the password to your home security system?

Dr. Joseph Mercola:

It's a rhetorical question. Of course not.

Dr. Vladimir Zelenko:

Why would we give him access to our genetic code? So Human 2.0, in the demented, depraved, deranged, paid in minds of these people is the next step up in the evolution of human beings. And I'm saying if you allow that to happen to yourself, you're no longer made in the image of God. You're made in the image of Bill Gates and Klaus Schwab.

Dr. Joseph Mercola:

Well, they've been doing that for a while now. And the most egregious example of that would be the company, 23andMe, which was at the time, I believe, the wife of one of the Google co-founders. And they just collected all ... Essentially gave the test away for free. It was like \$99, but there was no privacy issues with it. In other words, they could use your data and did use it to sell it to the drug companies. So that wasn't complete gene sequencing because the technology was relatively more expensive back then, but they still got large portions of the DNA sequenced.

Dr. Vladimir Zelenko:

This is more than sequenced. This is manipulating. This is altering.

Dr. Joseph Mercola:

You can be talking about the mRNA vaccine.

Dr. Vladimir Zelenko:

Yeah.

Dr. Joseph Mercola:

So, I mean, at this point, the instructions that they're inputting is just to create this toxic bioweapon, the spike protein. But are there other genetic manipulations you're referring to?

Dr. Vladimir Zelenko:

I'm not sure. I'm just telling you that this vaccine, everything's been done. If Sanjay Gupta has to go on Sesame street and use Elmo to sell and encourage kids to take to vaccine when children have a 99.998%

pre recovery rate from COVID with no treatment, and so there's no medical necessity for them to take the vaccine. All this rhetoric from the demented puppet in the White House where you shouldn't let your kids play with unvaccinated, all this rhetoric is all used as a coercive measure to get as many people tagged for they call the New World Order, which will be a crypto currency based system that is managed by a few players and used to enslave humanity.

Dr. Vladimir Zelenko:

One of the agenda of the World Economic Forum, they stated outright by 2030 is quote, "America will no longer be a superpower." And a few countries will be in control of basically the global governance. So how do you destabilize an economic engine like America? So you create a pandemic. You lock down middle class businesses, small businesses, because that's very dangerous. But you leave Walmart and Home Depot open because that's not dangerous, basically a wealth transference from the middle class to the people in ... It's a robbery, basically, in power, who want to be in power.

Dr. Vladimir Zelenko:

So this is one big attempt at enslaving humanity. It's a brilliant plan, by the way. It's evil, but it's brilliant because slavery has always been the most lucrative industry and asset throughout human history. And now is no different. And so you have a few sociopaths who believe in their immortality and think that they'll transfer their consciousness to some cyborg or end of forever, enjoying the whole world as their playground. Are you familiar with the Georgia Guidestones?

Dr. Joseph Mercola:

No, I think I heard you mention on a previous podcast, but I don't recall.

Dr. Vladimir Zelenko:

Yeah, just very huge granite monuments erected in a small town in Georgia, out of the blue, and it's basically 10 commandments of evil. And the first one ... No one knows who did it. The first one is the world population should be reduced to 500 million.

Dr. Vladimir Zelenko:

And that fits, actually, four months ago, Elon Musk debuted his humanoid robots. And during his presentation said that these robots will eliminate 90% of the workforce, and therefore we need a universal income. And so what that means, keep in mind that in the minds of these people, we're not made in the divine. We're cockroaches. And they're not going to throw endless universal income resources at cockroaches for too long. They'll do it initially in order to map out, identify the useless eaters and then they will be liquidated. This has happened before. I mean, just 80 years ago, you had the Nazi ideology based on eugenics, which created ... I'm speaking five, six hours a day. so really losing my voice. But three classes of people.

Dr. Joseph Mercola:

It doesn't help when you have one lung either.

Dr. Vladimir Zelenko:

Yeah. You have the Ubermensch, the Superman, what Nietzsche would call Superman. Then the mensch, which is the human, and then the Untermensch, which is the subhuman. And so in their model, the Superman, but in Nazism, were themselves who were descendants of Aryan gods, and that gave them the power to enslave others. So for example, the Anglo-Saxons, basically Europeans, were meant to be slaves

to the Aryans. And the subhumans, which I belong to, Jews, gypsies, Slavs, handicapped, political prisoners, we were meant to be vaporized, become dust.

Dr. Vladimir Zelenko:

That ideology did not go away. Actually, it resurfaced with the nuance that is not antisemitic right now. And in a kind of an abstract way, we're all Jews this time because the hierarchy here, it's not based on religion or identity, but rather on the deranged belief that they've evolved, the Superman of this generation, into a higher level of consciousness. They're woke and they understand and enlightened about the nature of the human condition. And they're custodians of the planet, and therefore it's their responsibility to make sure the planet has solvency, let's say, that it continues to exist. And therefore, we have to reduce the world population. You know who thought like this? Ted Turner, Prince Phillip. This is a very common mindset by many, many people.

Dr. Joseph Mercola:

So it's likely the death toll for what they're doing now will far exceed what's happened with what's occurred in previous genocidal interventions. I think the biggest being was in Stalin's Russia where you had 50, 60 million people. So we'll probably exceed that. I'm wondering what your perspective is on the future of whether it's optimistic or pessimistic, and whether we'll actually ever get to the other side, where these people will be held accountable? And if they are, behavior that you described of Sanjay Gupta going on Sesame Street, encouraging innocent, helpless children to be sacrificed, as you said, basically he's going to be held accountable. And this is the type ... If we have a different 21st century Nuremberg, will likely get the death sentence for that. So I'm wondering, what do you think is going to happen down the road?

Dr. Vladimir Zelenko:

I'm very optimistic about the future. I'll tell you what I really think is going on. It's what we see. And then there's the, let's call it spiritual physics at play. We as a society, Karl Jung, the famous psychoanalyst wrote, "The moral degradation of society begins with the degradation of the individual." So from that, we can actually learn that moral improvement of society begins with improvement of the individual. We, as a society, over the last 50, 60 years, have made some very, very bad choices. For example, we've de-sanctified or made defiled gender roles. If Biden would have his way, my 4-year-old daughter would be sharing a bathroom with a 30-year-old man who thinks he's a woman.

Dr. Vladimir Zelenko:

Marriage has lost its sanctity. The unborn are being massacred. And in the Bible, there's two cities that were destroyed, Sodom and Gomorrah, and there's an analysis why that happened. And it wasn't because of the immorality, because the whole world was immoral. It was because they codified immorality into the law of the land. That's exactly what was happening in this country. And so we've devolved. We've become devolved pigs where we worship the god of science, the god of technology, the god of money, god of power, anything but God. And we are clearly practicing child sacrifice.

Dr. Vladimir Zelenko:

According to Dr. Michael Yeadon, former VP of Pfizer, he told me personally, and then he actually publicized it, that for every one child that dies of COVID, a hundred die from the vaccine. Vaccine is a hundred times more lethal to children than COVID. So what do you call that? That's child sacrifice. And so I feel by way of analogy we're like in the generation of flood. The house is going to get cleaned. And each individual is given a choice to get on the ark or not.

Dr. Vladimir Zelenko:

Or, make it more simple. Who do you bow down to? Do you bow down to your creator, who makes you, every instant of time, happy birthday, just made you? You ask him for fortitude, endurance, strength, resolve, the ability to deal with the unknown and fear? Or are you going to give in to the fear and bow down to corrupt sociopaths, oligarchs, corrupt governments, and the false promise of the golden calf of these vaccines?

Dr. Vladimir Zelenko:

Because at this point, in this country at least, no one's holding you down and putting a needle into your arm. The majority of people, they want to travel by plane. They don't want to lose their job. They want to go to school. It's all these kind of quality of life decisions. In other words, normal society, the parents sacrifice for the wellbeing of the children. In pagan societies, we sacrifice the children for the purpose of the adults.

Dr. Vladimir Zelenko:

And so the answer to your question is we need organized civil disobedience. Do not comply. They can't imprison everyone. They can't fire everyone. They can't expel everyone. They can't lock down everyone. There's many more of us than them. And actually, let me speak to the military leaders, to the police, to people that are charged to protect society. You also have children. You also have parents. And we are relying on you to do what's best for the citizens of this country, to protect us from all enemies, foreign and domestic.

Dr. Vladimir Zelenko:

And so all we need to do is to coalesce with like-minded people. Take your kids out of school. Homeschool them. WHO came out with an edict that if your kids go to school, that's implied consent for the vaccine because you could have not sent them. And since you sent them to school, that's implying that you're consenting for them to be vaccinated, even without your knowledge.

Dr. Vladimir Zelenko:

For many decades, children were poisoned in school with absolute debauchery and immorality. That was the poisoning of their souls. Now their bodies are being threatened. So take your kids out of the public school system, homeschool them with like-minded parents. They'll do much better. You can teach them morality. You can teach them in safety. And basically, we have to make small pockets, like cities of refuge in a sense, of like-minded people and create an alternate society, do commerce with ourselves. And I know there are forces really working hard to create an alternate cryptocurrency or blockchain system that is decentralized and would allow for people who don't want to be tagged with a digital identifier to transact with each other.

Dr. Joseph Mercola:

Well, a number of experts already believe that cryptocurrency exists. It's called Bitcoin because it has been decentralized. But that's another topic. But I'm wondering, I'm sure you're aware of what's going on in Kazakhstan right now with this insurrection from the people and the government shutting down the internet. I'm wondering if you believe this is an example of what you're referring to?

Dr. Vladimir Zelenko:

I'll put it to you way. Australia has quarantine camps. People are being beat beaten in the street for smoking a cigarette without a mask, ankle bracelets for those that are refusing. Now, the only reason why in America this doesn't happen is cause there's 450 million guns in the hands of law-abiding citizens. And I hope there's a nonviolent resolution to this.

Dr. Joseph Mercola:

But do you believe that the Kazakhstan people in that country are rebelling this, just as you predicted the rest of the world's going to come to at some point?

Dr. Vladimir Zelenko:

Yeah. I think that as it's becoming more and more obviously, this has never been about COVID. It's always been about creating a New World Order, a Great Reset to build back better, a society run by a few sociopaths and the rest of us enslaved. Once that realization reaches a certain threshold of people, countries are going to change and fall like dominoes. Do you ever see what happened to Saddam Hussein, Qaddafi, Mussolini, Ceaușescu in Romania and many other, the Nazis, once decent people win back freedom? That's what I anticipate happening to the orchestrators of this.

Dr. Joseph Mercola:

What's your timeframe? You think it's going to be 2023, 2022, 2025?

Dr. Vladimir Zelenko:

It depends on us. We have some freedom, but freedom isn't free. The only reason we have freedom is because our grandparents had the courage and resolve to storm the beaches of Normandy and confront tyranny. Whether or not our children will be free depends on whether or not we are ready to sacrifice. Are we ready, in this generation, to pay the price, to ensure that our children thrive in freedom and have the ability to maintain God consciousness? So the answer to your question is it's going to happen. The unknown variable is to body count. And when that happens, I would hope that this interview, let's say, reaches the consciousness of every single human being. People choose to say no from this point on. I'm going to have to go in a minute. I have another interview. And we end this thing very quickly.

Dr. Joseph Mercola:

All right. I would've aspire to that hope too. So I want to thank you for your time with us today, all you've been doing. And I look forward to connecting with you personally next week. And stay healthy until then.

Dr. Vladimir Zelenko:

God bless you.
